

Case Study

ATLANTA BRAVES MIXED-USE

Atlanta, Georgia

Railing Design: Interna-Light™ Illuminated Railing Clear Anodized Finish

Architect: HGOR

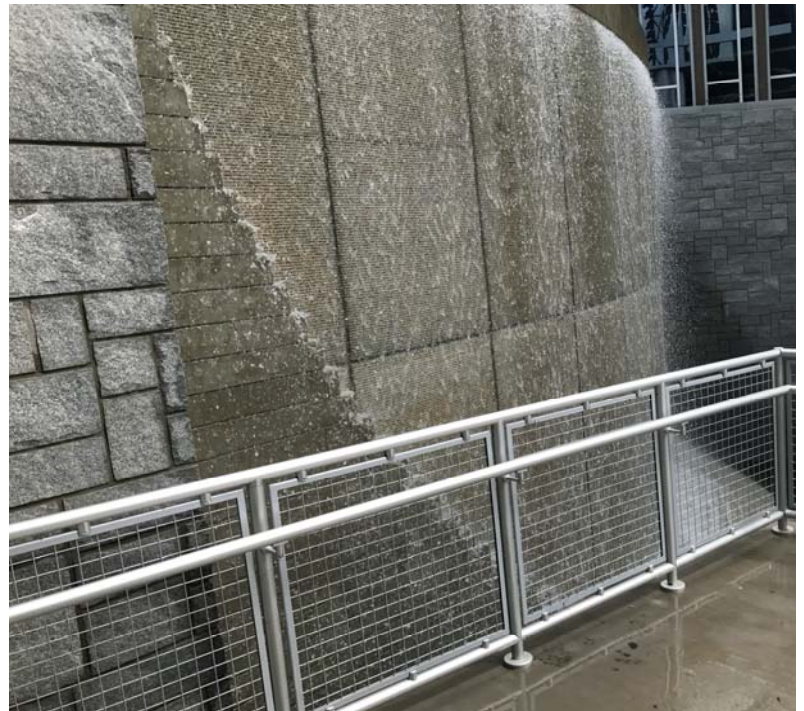

Infill: 2" x 2" Stainless Steel Square Wire Mesh

Contractor: Mills Specialty

The Battery Atlanta is a lifestyle destination anchored by SunTrust Park, the new home of the Atlanta Braves. HGOR Planners and Landscape Architects were tasked with designing the hardscape of the sixty acre mixed-use project. Central to the design is a 75,000 sf. dining and entertainment plaza connecting the stadium with two levels of surrounding retail, a ten-story office building and a 300-room hotel.

High egress areas featured integrated use of LED pod lighting for discreet but needed illumination creating the perfect lighting effect.

A major portion of the railing scope is adjacent to a large water feature, Hollaender's Interna-Rail® aluminum railing system was selected for its high level of corrosion resistance and ease of maintenance.
