

# CENTER GROVE HIGH SCHOOL NATATORIUM AND ADDITIONS

Greenwood, Indiana

Architect: Fanning Howey

Contractor: Spohn Associates

Interna-Rail® with Wire Mesh Panels • Interna-Rail® with Glass Panels • Structural Glass Railing

The Indianapolis based offices of Fanning-Howey Architects and specialty railing contractor, Spohn Associates collaborated to accomplish the vision of Center Grove High School's Natatorium facility addition. The natatorium is home to one of Indiana's largest competition pools which includes a ten-lane Olympic-sized aquatic center connected to the existing campus. Hollaender's Structural Glass Railing System with aluminum base shoe and top cap was the perfect combination of railing safety and unmatched sight lines for spectators.

The design team artfully weaved the school's sunburst red color throughout the railing system, providing a fantastic environment for competition and spectators.

The railing design highlighted the versatility of Hollaender's railing offering. In addition to the Structural Glass System in the spectator viewing areas, the design required the installation of Hollaender's Interna-Rail® system with both glass and wire mesh infill panels, wall-mounted and post-mounted grabrail, as well as exterior clear anodized railing for the entrance stairs and ramp. The design of the monumental stairway included the Interna-Rail® aluminum railing system with wire mesh infill panels which provided a true centerpiece connecting the new aquatic center and the existing facility.
